Astrum Health is a leader in providing education and solutions that improve infection control within medical environments.

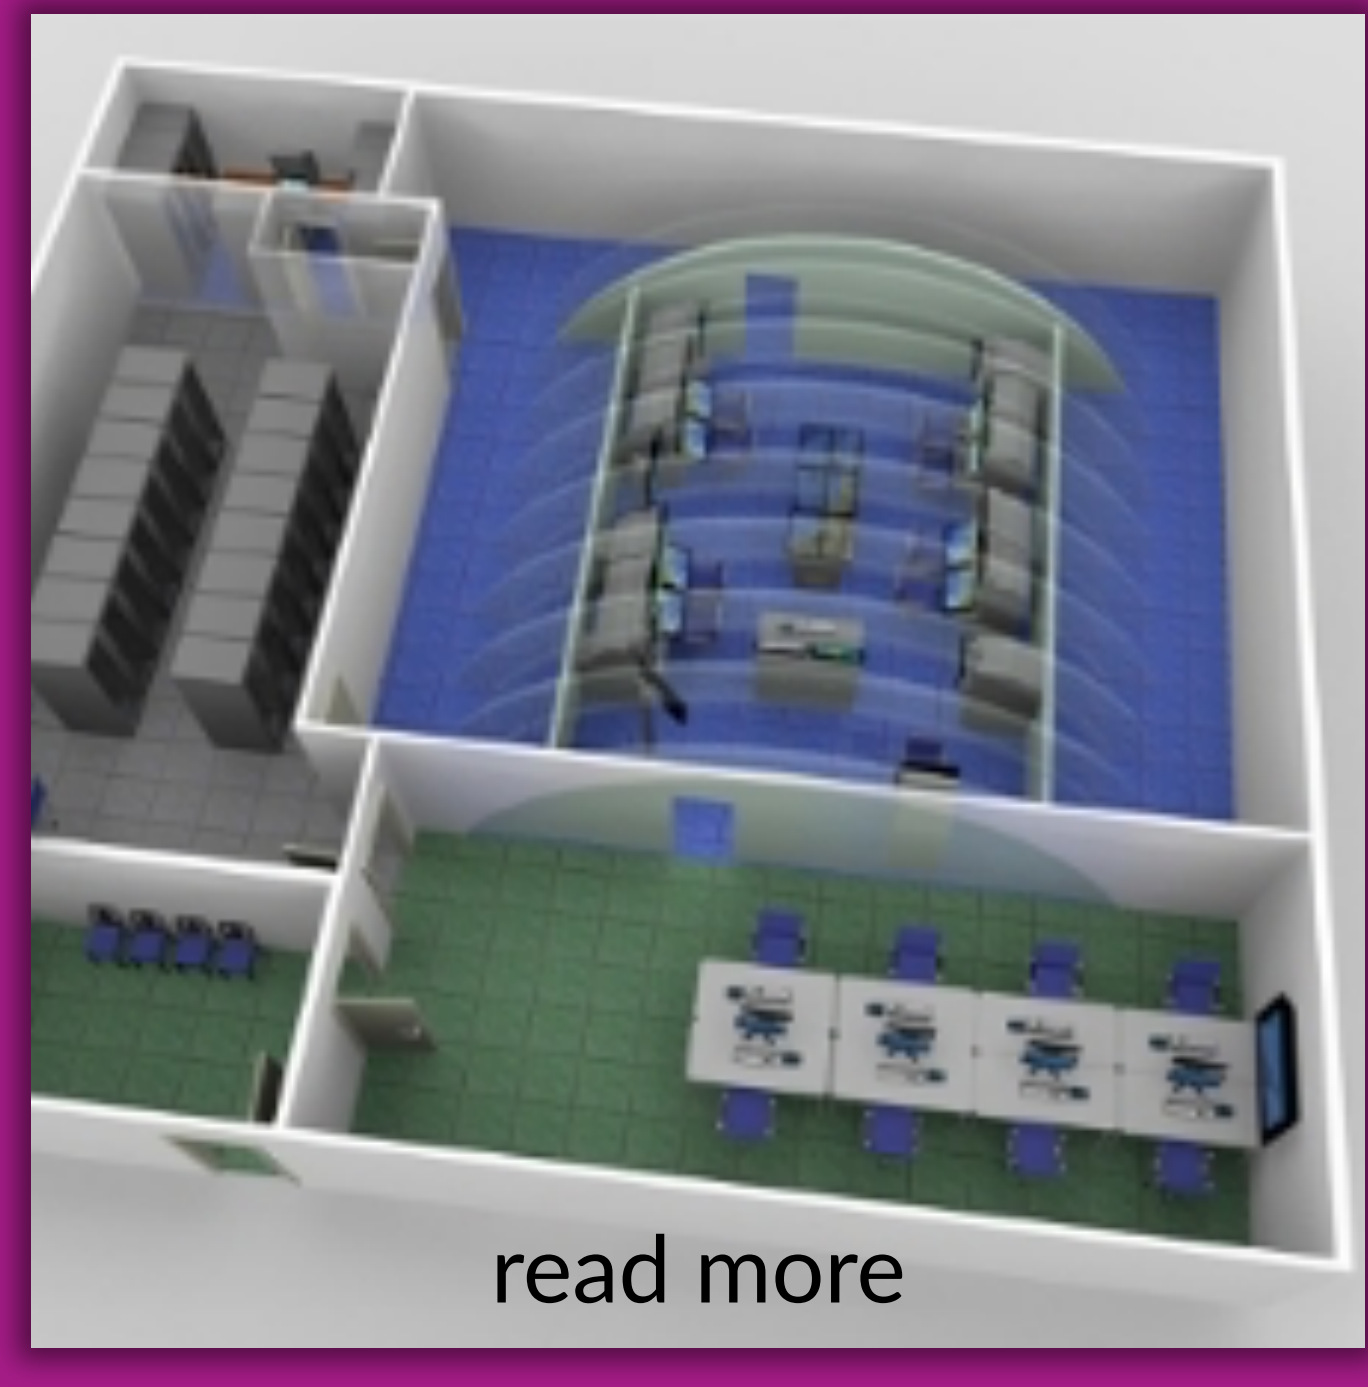

Washer disinfectors for healthcare. Enter a world of superior washer disinfecting efficacy - best in class

Uncompromising quality solutions for sterile services that promote patient care and safety

Offering a new generation of track and traceability solutions for sterilization process monitoring

Understanding and supporting our customer needs - Service is our most valuable product

Facing the reality

Solutions are not only for problems you can see

what people say about us

mr johnes

" The Aquaphase washer minimised closure of superbug infected ward as our medical equipment and furniture could be decontaminated and turned around within 24hours. Something that would need days under manual decontamination costing "the"hospital "vast" sums" in "lost"bed" days,"and"staff"and"patient"disruption. "

mrs johnes

" Investing in a washer disinfecter employing chemical disinfection has increased our equipment life cycle as opposed to thermal disinfection which has a negative effect of damage to equipment surfaces, hence cost savings from reducing condemned equipment. "

mrs johnes

" Jet washes and manual decontamination seemed effective until we employed an automated washer disinfecter which meant we could validate reproduce washes. With the Aquaphase, we were also able to quantify and regulate our utility usage. "
